PROFESSIONAL SUMMARY

Solutions Architect with 18+ years in federal healthcare technology, 15 of them inside CMS. Led the Beneficiary Claims Data API (BCDA), one of the federal government's first implementations of the HL7 FHIR Bulk Data specification, delivering population-level Medicare claims to Accountable Care Organizations and earning a FedHealthIT Innovation Award. Technical architecture lead on **$200M+ in awarded CMS contracts**, lifting team win rate from 20% to 33%. Builds the systems as well as the strategy: production retrieval pipelines, agentic orchestration, a published open-source MCP server, and FHIR-native tooling, all in HIPAA and FedRAMP-governed environments. CPARS Excellent ratings across multiple federal contracts.

SELECTED AI BUILDS

- **Open-source FHIR quality-measure tool:** solo full-stack build (FastAPI, CQL engine, React) behind **600+ nightly integration tests**; zero production incidents at a federal interoperability event.
- **Published MCP server for Google Docs** (PyPI, MCP registry): **19 tools** whose mutating operations run a verified-write contract, so an AI agent cannot silently corrupt a system of record. **640 tests**.
- **Internal AI platform for federal proposals:** codified a full proposal process into 38 repeatable agent workflows (reported ~20% cycle-time reduction), used on a live federal solicitation.

EXPERIENCE

Bellese Technologies

April 2024 – Present

Solutions Architect · Remote

- Delivered **$200M+ in competitive federal wins** across 6 proposals as technical solution lead, lifting team win rate from **20% to 33%** through differentiated technical approaches.
- Authored a next-generation clinical-quality-language execution architecture (Substrait intermediate representation, SQL-on-FHIR storage) embedded as the technical differentiator across three active CMS pursuits with combined ceiling above **$175M**.
- Built an EHR-integrated Medicare provider enrollment prototype using React, OAuth 2.0, and **SMART on FHIR**, letting clinicians submit enrollment applications from inside EHR workflows and reducing enrollment from hours to minutes.
- Led a **20-engineer enterprise AI adoption program** to executive cadence, owning the weekly CEO readout covering adoption metrics, token-cost modeling, access policy, and a formal go/no-go framework, and leads a reusable AI skill library transferring delivery patterns across active federal programs.

Globalization Partners (G-P)

December 2021 – April 2024

Principal Technical Program Manager, Product Operations · Remote

- Established and led the global Product Operations function for an enterprise SaaS platform serving **1,000+ global employers**.
- Led ChatGPT Enterprise rollout for **150+ product and engineering staff** across 24 distributed teams, delivering governance policies, prompt libraries, and onboarding playbooks that cut manual reporting effort by 20% per week.
- Centralized delivery telemetry across Jira, release management, and operational reporting, driving a **22% increase in operational efficiency** and a 30% reduction in planning cycle time.
- Implemented an ITIL v4 change-enablement framework, achieving **zero moderate or high-severity findings** in consecutive SOC 2 and ISO 27001 audits.

Skyward IT Solutions (8(a) Small Business)

June 2019 – September 2021

Director of Program Delivery · Remote

- Directed **five federal programs (60+ FTEs, $50M+ revenue)** across product management, engineering, DevOps, and human-centered design; grew the delivery vertical by 25 FTEs by establishing a CMMI-certified PMO.
- Achieved **"Excellent" CPARS ratings across three federal programs** in quality, schedule, cost control, and regulatory compliance, directly supporting successful recompetes.
- Built system telemetry dashboards (CloudWatch, New Relic, Splunk, Tableau) achieving **99%+ service-level objective adherence**, and passed **100% of contract compliance audits** across firm-fixed-price and time-and-materials vehicles with full P&L accountability.

Ad Hoc

January 2017 – June 2019

Technical Program Manager · Remote

- Led the FedHealthIT Innovation Award-winning **Beneficiary Claims Data API (BCDA)** program ($16M, 25+ FTEs), launching one of the first federal **HL7 FHIR Bulk Data** APIs so Medicare Accountable Care Organizations could retrieve population-level claims rather than one patient at a time.
- Managed the **Quality Payment Program** ($45M, 50+ FTEs) delivering RESTful APIs and cloud infrastructure; achieved **99.99% availability** and **91% clinician participation**, surpassing forecast KPIs.

Earlier Experience

2008 – 2017

- **Technical Project Manager**, Oracle | Opower (2016–2017). Delivered Opower's SaaS product suite for large energy utilities serving 1M to 10M customers per year.
- **Technical Product Manager**, Aquilent, CMS / HealthCare.gov (2014–2016). Led Agile delivery during ACA Open Enrollment; shipped the premium estimation ("window shopping") tool, the period's highest-impact feature, driving an **80% increase in enrollment conversions**.
- **Technical Project Manager**, Synergy Software Design (2008–2014), and a brief 2021 engagement at Natural Health Sherpa. Managed the full lifecycle of a **$2M+** enterprise web platform for planning and estimating specialized U.S. Navy assets.

FEATURED PROJECTS

Open-source FHIR Measure Calculation Tool

Solo Architect & Engineer

FastAPI, React, Python, AWS · github.com/Bellese/Lenny

Production-grade electronic clinical quality measure (eCQM) orchestration platform built solo with agent-assisted development. Established CI/CD from scratch with an OIDC-federated AWS deploy and **600+ integration tests running nightly**. Shipped 47 improvements across two sprints, stabilizing the platform for a federal connectathon with **zero production incidents**.

verified-googledocs-mcp

Solo Architect & Engineer

Python, FastMCP, Google Workspace APIs · github.com/michaelrobertsutton/verified-googledocs-mcp

Public Model Context Protocol (MCP) server giving AI agents a safe interface to Google Docs, published to PyPI and listed in the MCP registry. Its **19 tools** run a verified-write contract on every mutating operation, returning before/after evidence and revision IDs so a call cannot report success for an edit that did not land. **640 tests across 38 modules**, plus a live API acceptance gate.

CERTIFICATIONS

Project Management Professional (PMP), PMI · Certified HL7 FHIR Foundational Implementer, HL7 · AWS Certified AI Practitioner · SAFe Agilist (SA), Scaled Agile · Certified ScrumMaster (CSM), Scrum Alliance · Shipley POWeRful Proposal Writing

EDUCATION

University of New Haven

Two Bachelor of Arts Degrees · Minor: Business Administration

CORE COMPETENCIES

Architecture & AI: AWS, REST API design, FHIR / HL7 / SMART on FHIR, GenAI and LLMs, RAG, agentic workflows, MCP server development, Python, React, SQL · **Capture & Delivery:** technical volume leadership, proposal development, win strategy, orals, past performance, Agile/SAFe/Scrum, program governance, risk management, P&L, CMMI, ITIL · **Federal Health & Compliance:** CMS/Medicare programs, CPARS excellence, ATO, FedRAMP, SOC 2, ISO 27001, Section 508, HIPAA
